INTRODUCTION

This is a bibliographic listing by specified major subject of all material selected in January 1972 for treatment in subsequent reports. It includes laser technology, effects of strong explosions, geosciences, and particle beams. Material on biocybernetics has been included as a fifth optional subject. With the exception of geoscience entries, the material includes some entries from late 1971 which have not otherwise been reported.

To avoid excessive duplication in reporting, only laser entries concerning high-power effects have been included here, since all laser material will appear routinely in the quarterly bibliographies.

An index identifying source abbreviations is appended.
